TITLE: A Photoelectric Apparatus for Measuring Torque (Foto-elektricheskiy pribor dlya izmereniya krutyashchikh momentov)

PERIODICAL: Izmeritel'naya tekhnika, 1959, Nr 2, pp 28-29
(USSR)

ABSTRACT: The photoelectric apparatus, developed by Professor S.A. Strelkov is for measuring torque on shafts of building and road construction machines. There are two variants of this apparatus, one for installing on shafts which may be removed for this purpose, and the second for non-removable shafts. The apparatus works on storage batteries, which is very valuable during field tests. Torque measurement is done by light waves. The paper then describes briefly how both variants function. Tests made so far show that under field conditions, the degree of error is 3-4% and under laboratory conditions, it may be reduced to 2%. This apparatus has proved invaluable

Trophic Disturbances of the Muscles

Orig Pub : V sb.: Ucheniye N.Ye. Vvedenskogo v klinich. praktike.
Odessa, 1957, 99-105

Abstract : In 68 cases of progressive muscular dystrophy there
was a contraction of the unchanged and hypertrophic
muscles and a persistent elongation of chronaxia
(or absence of galvanic stimulation) on the atrophic
muscles. In a number of cases when there was no
tendon reflex, there was a heterochronia of the nerve
and muscle; in 5 cases restoration of isochronia

Experiments in the Vernalization Method on Tree Seeds," N. A. Kozovnikov

"Dok Ak Nauk SSSR" Vol LXXI, No 3, pp 561-563

Discusses results of tests made in 1937, 1939 - 1941, and 1947 - 1949 on effect of vernalization of seeds of trees on survival and development of saplings. Finds test plants have more fibrous root systems, better development of external parts, greater vitality, and higher probability of survival than those with seeds not treated. Seed can be planted later than untreated seed.

<p>3636. Analytic investigation of the characteristics of an induction motor, allowing for saturation. N. I. KURDYALOV. <i>Elektrichestvo</i>, No. 6, 16-21 (June, 1951) In Russian.</p> <p>The method uses a general proposition of G. N. Petrov [<i>Elektrichestvo</i>, No. 12 (1948)] i.e. that the locus of the ends of the current vectors in the most general case is a 10th order curve, under certain conditions degenerating into a 6th order curve. For low saturation and loads not exceeding 130% of the rated load, the stator current vector may move either on a Pascal's limaçon or an ellipse. For other values of the saturation the character of the loci varies accordingly. The results of this theoretical investigation combined with practical data on tooth saturation and a simple equivalent circuit treatment yield an approximate analytical method for calculating the characteristics of induction machines with partially variable parameters for machines working as generators or in braking conditions, in systems with variable parameters and types with variable flux. AUTHOR: Konovalov, N.P.

TITLE: Eliminating Excesses in Records and Reporting (Ustraneniye izlishestv v uchete i otchetnosti)

PERIODICAL: "Izmeritel'naya Tekhnika", No 5, Sep-Oct 1957, pp 92-93 (USSR)

ABSTRACT: The article mentions the regulation (prikaz) No 20 of 14th January 1957 of the Committee of Standards, Measures, and Measuring Devices as one that enabled simplifying and reducing the checkup records being kept on measuring equipment, but states that after cancellation of the Committee's Rules No 10-40 and 11-41, many rules which regulated supervision of measuring equipment are not included in other existing regulations. As exchange of practical experience, a system is described of record keeping at an unidentified Leningrad plant where the 12 forms introduced in 1948 by the Committee's prikaz No 221 have been replaced by one form (shown in the article). A number of documents have been abolished or abridged. A stamp showing the accuracy class and the date for checkup was introduced for 2nd accuracy class universal gages, (for this stamp a paint is used containing 40% iditol, rectified spirit, and coloring substance). The author considers it desirable that the Committee work out

AUTHOR:

Konovalov, N.P.

TITLE:

A Device With a Theodolite for Checking Angle Gages
(Ustanovka s teodolitom dlya poverki uglovykh mer)

PERIODICAL:

Izmeritel'naya tekhnika, 1959, Nr 3, pp 9-10 (USSR)

ABSTRACT:

A device for checking angle gages was designed and built at the Leningrad plant "Bol'shevik". The principle of this device was developed by the Khar'kovskiy gosudarstvennyy institut mer i izmeritel'nykh priborov (Khar'kov State Institute of Measures and Measuring Instruments). Figure 1 shows the theoretical principle of this device, while figure 2 is a photograph of the instrument. A one-second theodolite is used as a goniometer which is mounted on a rotating tripod. The latter has the same vertical axis as the theodolite. The dial of the theodolite rotates together with the tripod. The angle gage to be checked is placed on the platform on which the tripod is mounted. A lightbeam from a collimator is reflected by the angle gage to an auxiliary mirror,

Card 1/2

A Device With a Theodolite for Checking Angle Gages

SOV/115-59-3-6/29

from where it is sent to the theodolite. The coincidence of the collimator cross with that of the theodolite indicates a definite spatial position of the gage surfaces in regard to the other stationary elements of the optical system. In addition, some of the measurement procedures are explained. There are 1 diagram and 1 photograph.

754. KONOVALOV N. V. Unusual changes in cell nuclei in hepato-lenticular degeneration and in hepatic disease Arkh. Patol. 1948, 10/4 (32-35)

In three out of eight cases of hepato-lenticular degeneration the author found changes in neurons corresponding to those in Alzheimer glia cells. Alzheimer cells were also found in the convoluted tubules of the kidney in two cases. Similar changes were observed in 18 cases of acute or subacute toxic dystrophy or cirrhosis of the liver. In one case in particular degeneration of nervous tissue resulted in an akinetic-rigid syndrome for six months before death. Typical Alzheimer cells were found post mortem. The author believes that these histological changes are due to a metabolic product of the liver which circulates in the blood and exerts its specific toxic action on the cells subsequently called Alzheimer cells. An injury of cerebral areas calls forth focuses of inhibition. The intensity, spread and lasting of the inhibition depend on the character of the focus affected. Besides the organic disturbance of the cerebral tissue a disturbance of the entire cerebral neurodynamics takes place. After the first rehabilitation phase the brain is freed from the post-insult inhibition. The second rehabilitation phase means a compensation in the very sense of the word. To compensate the functional defect it is necessary to induce a sufficient inflow of afferent impulses. Movement therapy may bring forth unwanted synkineses, pathological stereotypes. It is ne-

"Working Processes and Characteristics of the Liquid Fuel Rocket Engines" (Rabochiy Protsess i Kharakteristiki ZhRD), Vest. Vozd. Flota, No.1, 1954.

This represents the 20th of a series of articles under a common title "Theory of Reactive Engines" (Teoriya Reaktivnykh Dvigatelye).

Summary of article D-206406, 28 Mar 55

AID - P-177

Subject : USSR/Aeronautics
Card : 1/1
Author : Konovalov, N., Lt. Col., Engineer, Kandidat of Technical Sciences
Title : The Theory of Reactive Engines
Periodical : Air Force Herald, 1, 67 - 79, Ja 1954
Abstract : This is the 20th part of the authors article on re-active engines. Its subtitle is: The Working Process and the Characteristics of Reactive Engines for Liquid Oxidizer (RELO). This part is divided into following chapters: Introduction, Efficiency coefficients of RELO, Basic parameters of RELO, Fuels for RELO, Combustion chamber of RELO, Gas flow in RELO, Characteristics of RELO. Diagrams, graphs, formulae.

APPROVED FOR RELEASE: 06/19/2000
Kazandzhan, P.K.; Alekseyev, L.P.; Govorov, Aleksandr Nikolayevich, Konovalov, Nikolay Iefimovich, Nekhayev, Yulian Nikolayevich, and Fedorov, Roman Mironovich

Teoriya reaktivnykh dvigateley; rabochiy protsess i kharakteristiki (Theory of Jet Engines; Operation and Characteristics) Moscow, Oborongiz, 1958.
533 p. 20,000 copies printed.

Ed.: (Title page): Stechkin, B.S., Academician; Ed. (Inside book): Yanovskiy, I.L., Engineer; Ed. of Publishing House: Bogomolova, M.F.; Tech. Ed.: Rozhin, V.P.; Managing Ed.: Sokolov, A.I., Engineer.

PURPOSE: This is a textbook approved by the Ministry of Higher Education of the USSR for students of aviation vuzes. The book may be also useful to engineers working in the field of aircraft engine construction.

COVERAGE: This book is an independent part of the general course in "Theory of Jet Engines." The first part of this series, "Bladed Machines", was published in 1956. In this book the authors describe in detail gas dynamics analysis, the testing methods, and the characteristics of a number of types of jet engines.

11

In the compilation of this book the works of Stechkin, B.S., Kazandzhan, P.K., and others of the authors' collective were used, as well as the existing literature on bladed machines and jet engines. Individual chapters were written by the following authors: Ch. I and IV, by Govorov, A.N.; Ch. II and XV, by Alekseyev, L.P.; Ch. III and Sec. 7 of Ch. XVI, by Konovalov, N. Ye.; Ch. V to IX, by Nekchayev, Yu. N.; Ch. X, XI, and Sec. 1-6 of Ch. XVI, by Fedorov, R.M.; and Ch. XII, XIV and Ch. XVII by Kazandzhan, P.K. The authors express thanks to
